FLEXIFOIL PROTON

FLEXIFOIL[®]
Live to Fly.

- | 4 Strut layout |
- | Simple, controlled relaunch |
- | More than enough depower |
- | Multiple line connection points: tune the kite to your requirements |
- | Premium quality Japanese and European materials |
- | New and improved construction techniques |
- | Unique Kevlar reinforcement patch material |

The Proton marks the next level of evolution for Flexifoil's hybrid line up. A stable and predictable aerofoil with swept back wingtips and leading edge curvature back.

Lowering the aspect ratio has given the Proton improved relaunch and depower without compromising the hybrid kite feel.

The Proton is the perfect choice for those who are new to kitesurfing. An ideal kite to perfect the basics and then progress in freeride, freestyle or wave disciplines without being held back by the kite's performance.
